

Quick Comet Craft

Social Rugrats, Pinterest

Teachers Information:

Here is a fun comet craft that your students can get excited for! Each student should make their own comet out of basic art/craft materials to hang in your classroom. This will be a beautiful display to have up for space related lessons and activities before and after coming to the CLC.

Procedure:

- Have the students use black construction paper with crayons or paint to draw planets and stars in the night's sky
- Cut styrofoam balls in half and cover one half in foil
- Glue the ½ ball to the paper
- Use different art supplies to really get artistic for the tail of the comet
